

SUMMARY

A Cybersecurity-focused Developer Skilled In Web Development & Secure App Development, Blending Secure Coding With Efficient System Design. Certified In CEH And CND, I Integrate Devops, CI/CD, Docker, Git/github, And Server Management To Deliver Scalable, Secure Solutions. Passionate About Both Offensive And Defensive Security, I Bring A Disciplined, Growth-oriented Mindset To Every Project — From Backend Development To Freelancing And Beyond.

- Kidnapping Case Forensic Analysis

Digital Forensics

Conducted in-depth forensic analysis using **Autopsy** on a memory dump from a criminal investigation, successfully recovering deleted images, browser history, system artifacts, and file traces vital to identifying suspect behavior and uncovering **Extortion evidence**.

Reconstructed the incident timeline and compiled detailed **forensic report**.

► pyXtools – Ethical Hacking Educational App

Flutter, Dart, Jetpack Compose, Python

Developed a modern Android app that teaches **ethical hacking concepts** using Python scripts and practical examples.

Built with **Flutter** and **Jetpack Compose–style animations** for a smooth, interactive learning experience.

Includes modules for tools, tips, network security basics, and guided hands-on demonstrations.

► Mini SOC Log Monitoring & Threat Detection Lab

Splunk & Log Analysis

Built a functional mini-SOC using **Splunk Enterprise** on Kali Linux and a **Universal Forwarder** on Ubuntu VM to simulate real-world log collection and threat detection.

Monitored critical logs like `/var/log/auth.log` to detect **failed login attempts**, **brute-force patterns**, and **SSH abuse**, using **SPL queries** for data extraction and correlation.

► Session Vulnerability

Web Application Security | Session Management

Identified a security flaw where active user sessions remained valid even after a password reset/change, enabling **unauthorized access persistence** across multiple browsers.

Performed **dual browser testing** and **Bug Bounty**.

► File Integrity Monitor

Python-Watchdog

Developed a **Python-based** File Integrity Monitoring tool using **watchdog** and **hashing** to **detect unauthorized file changes** in critical system directories, enhancing real-time threat detection and incident response.

SOFT SKILLS

Team Leadership

Presentation Skills
